Gentlemen:

RE: INDUSTRIAL WASTES

Will you please advise if your company has conducted any tests to determine if "Genevolv" solvents have any adverse effect on sewage treatment anaerobic digestion?

E. I. de Font de Nemours has answered that they have no information available when the same question was asked of them. They referred us to you.

The reason for the question is that there are a number of industrial firms in our service area now using these solvents and we have been experiencing erratic digester action in our sewage treatment plant for about the past 9 to 10 months. We wish to determine if there is any relationship between these two things.

We would appreciate any information you may be able to furnish including the chemical makeup of these solvents.

Very truly yours,

GEORGE L. McPHEETERS
Water Division Engineer
